

KEEPLIT DAM DEEP CORING & DTH

DATE
Jul 2019 - Jun 2020

LOCATION
Keepit, NSW

CLIENT
SRG Global Civil

VALUE
\$1M

The Keepit Dam project was a \$100M+ upgrade to ensure compliance with contemporary safety standards. Part of that included installation of 52 post-tensioned anchors in the spillway piers and crest. Decotec's scope included coring up to $\varnothing 350 \times 11\text{m}$ deep and DTHH drilling 17m deep.

"SRG and Decotec developed a highly collaborative relationship on the project which enabled a fantastic outcome. Decotec's technical ability to solve the challenging and unique coring and drilling works, along with the high quality work and attention to detail, is what's required on a dam project."

Sam Pearce | SRG Construction Manager

DECOTEC
